AUTOMATIC SOIL SAMPLERS

MAKING THE MOST OUT OF YOUR SOILS

The Wintex soil samplers which we use are a key component of our soil sampling process. They are great to use and maintain, reliable in the field and we have no hesitation in recommending them to others looking for hydraulic sampling equipment.

Charlie White,
Precision Decisions, UK

AUTOMATIC SOIL SAMPLERS

MAKING THE MOST OUT OF YOUR SOILS

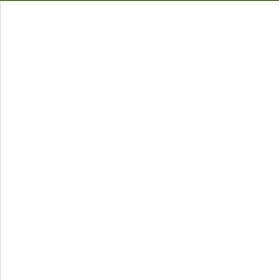

Soil sampling and testing is the first step in generating field-specific information which is essential for accurate fertilizer recommendations. Precision sampling and exact soil analysis optimizes fertility recommendations, increases yield potential and reduces risk of misapplication.

As an educated Farmer and Agronomist I discovered the early-on need to simplify and improve the collection of soil samples. Therefore I established Wintex Agro which has been developing and manufacturing high quality automatic soil samplers since 1998. Our soil samplers save time, reduce operator fatigue, are accurate and easy to operate, and sampling is always done at a consistent depth.

Our customer experience with Wintex samplers around the world allows us to use our knowledge to be in the lead in design and functionality. Today we can say that we are a market leader, a position we have earned through our loyal customers.

Our focus is consistently on user-friendliness, reliability, ruggedness and minimum maintenance, and we concentrate on what we are good at: developing soil samplers of the highest quality.

Best regards
Torben Vinther
Owner and Managing Director

„iAGRO“ is the leader in precision agriculture in Lithuania, Latvia and Estonia. We are proud to be the official dealers of:

“Trimble Agriculture” – GPS automatic steering solutions and implement control enhancing the efficiency of farming

“Wintex Agro” – soil sampling devices for quick and easy soil sample collection from different depth

“DICKEY-john” – highly accurate grain analysis computers and moisture testers calibrated and certified by Seed and Grain Agency

“Trimble Farm Works” and “Connected Farm” - software for farm and field data management

INNOVATIONS FOR AGRICULTURE

WINTEX 1000

- Most-sold soil sampler for 0-25 cm
- Fastest soil sampler available - one stick in 3-5 sec.
- All operations carried out from the driver's seat
- 100% automatic

I purchased my Wintex 1000 in the fall of 2002 after seeing it demoed at a trade show in New Mexico and I have not regretted my purchase. It has performed very well in all sorts of soils, moistures, and stones. I like the durability, dependability, cycle speed (about 3 seconds), ease of handling and the service from the dealer.

Jesse Weaver,
Agri Consulting Services, USA

WINTEX 1000S

- 0-30 cm
- Strong, with hydraulic hammer
- Operates in all kinds of soil - sandy, hard, compact, dry soils
- 100% automatic

The Wintex soil sampler is a perfect fit for my John Deere Gator. It's capacity for soil samples per hour has allowed me to cut my sampling time in half. This system has enabled me to start site specific sampling while remaining cost-effective and improving my crops yields.

Dustin Mulock,
Mulock Farms Ltd, Canada

WINTEX 2000

- 0-60 cm
- Robust, hydraulic hammer
- Samples from two different layers in one step
- Works in any kind of soil
- 100% automatic

The Wintex 2000 works really well, both in very clayey and in sandy soil. It is very reliable, takes samples of high quality and separates them precisely. Sampling is carried out quickly, which previously was a much more time-demanding job. Today with the Wintex 2000 we conduct sampling in less time, we cover larger areas and sample with greater confidence. The Wintex 2000 fully meets our needs and we recommend it safely.

Rafael Bull,
Timac Agro S.A., Paraguay

WINTEX MCL3

- 1,20 m and 2 m
- Strong, powerful
- For all kinds of soil
- Also for tractors
- Semi-automatic

We are using two Wintex MCL3 for soil sampling in 2 m. They are operating very satisfactorily all over Denmark in all kinds of soil. The MCL3 is easy to use, efficient, really time-saving and diminishes the physical strain.

Henrik Junker-Hansen,
AgroTech, Denmark

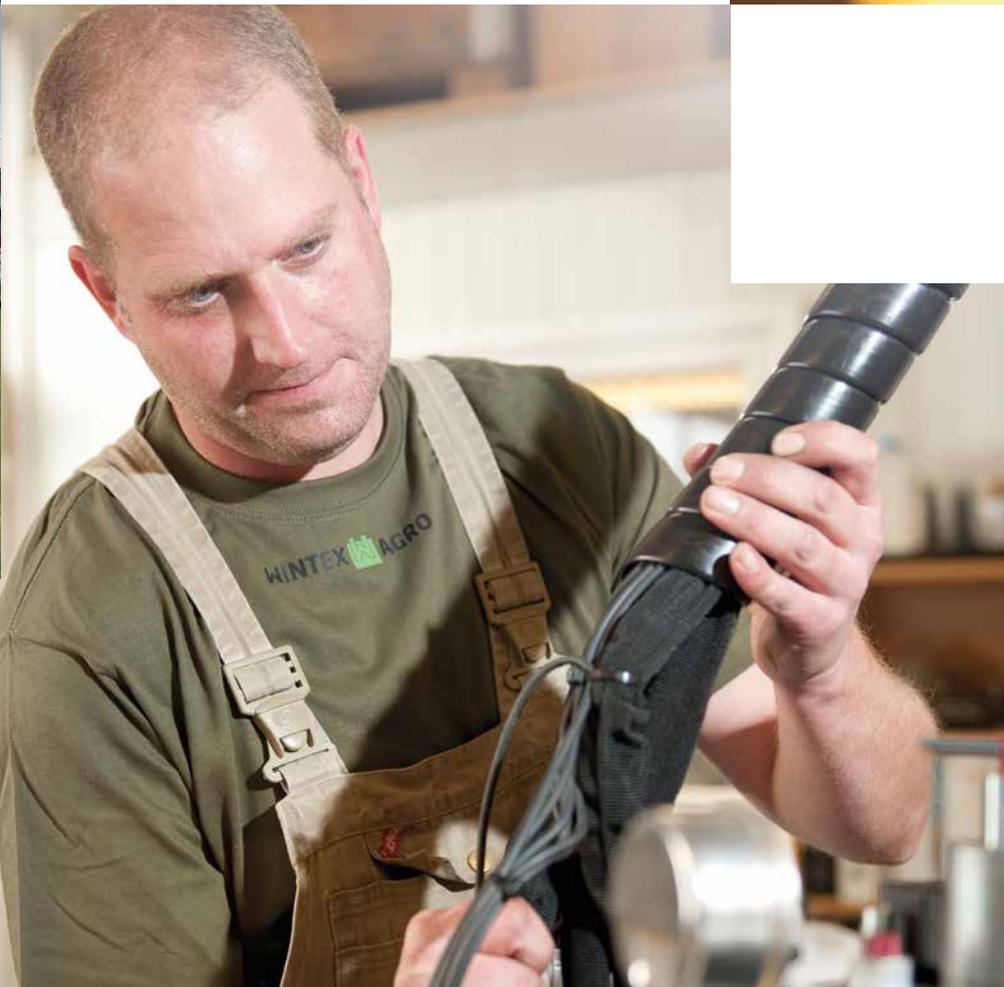

We have been associated with Wintex for around 15 years now, so I have got to know the machine very well. From the very early models, I have been very happy with the job the Wintex does for us, time and time again, on a daily basis. We started out with one sampler and have steadily built up to running three samplers and for ten months of the year.

Richard Taylor,
H Melton and Son, UK

Standing still is regressing. Ever since the invention of the first Wintex soil sampler we have used our experience to constantly improve and develop our products. That is why we have been the market-leading manufacturer of soil samplers since 1998.

I've been using a Wintex for soil sampling for over 2 years now and am very pleased with it. It's allowed me to expand my business through increased productivity, accuracy, flexibility, and consistency. My Wintex allows me to sample any soil type from sand to muck and I even take some frozen soil samples! My Wintex is very reliable routinely taking over 200 samples per day. I've been able to increase the number of samples that I can take without increasing my workload or hiring help. That's a great benefit for a small business such as mine.

Tom Prosser,
Prosser's Ag Service, USA

All soil samplers are manufactured in our workshop in Denmark. We are constantly keeping an eye on the production and we are in close contact with our skilled production staff.
